

EVERY COMMUNITY CAN HAVE A SWIMMING POOL LIKE DEMING'S

A BIG swimming pool at Deming, N. M., built for the military camp during the war, and lately turned over to the community, has already become a valuable asset. It is said that people come as far as 50 miles from every direction to use the pool and enjoy a swim. From mines and mining towns, farms, ranches, villages, and railroad section points the people troop in. In spite of the low rate charged for service at the pool, the profits are large and the pool will show a substantial profit for the year. Several thousand dollars will be available to be spent on parks, a community house, or other public improvements.

In the southwest, where nature has provided few ponds or running streams, and where the winter is short and the heat is long, there is greater need than elsewhere for artificial bathing pools.

A city like El Paso needs public baths and swimming pools within reach of every boy and girl, man and woman. Among the Spanish-American element population the consideration of health are even greater than those of recreation, while among the well-bred population throughout the city there exists the imperative need of recreation facilities, best served, in summer at least, by swimming pools.

Every small city, town, and village can have its swimming pool. Many ranch owners can afford to equip their own home places. A pool like that at Deming, 120 feet by 80, costs \$25,000 to \$35,000, but at that price it is a good investment for any community and can be made self-supporting and even profitable. Smaller pools for smaller centers can be built for as little as \$5,000, while \$15,000 will buy a good deal of a pool.

The idea of establishing a big bathing pool as the prime attraction to bring people from a distance into the town for recreation is rather a new one; in Deming's case, not only does the pool itself return a profit, but the community gains directly and indirectly from the trade and other disbursements of the visitors. Every community large and small might desire these financial benefits while at the same time furnishing the best sort of recreation facilities for its own people.

It will pay to buy and build the best, in every case. The pool should be as large as can possibly be afforded, but far more important than size is the question of hygiene. There must be a good supply of fresh clean water, there must be sterilization and scrupulous cleanliness, with provision to remove all foreign matter regularly and continuously and to strain the pool thoroughly at intervals. If the water can be heated enough to take the chill off, so much the better and the season will be longer; exhaust steam can often be had for nothing for this purpose.

Recreation is one of the big problems of El Paso and all other southwestern communities. While there is considerable interest in parks, not enough attention has been paid to providing swimming and bathing facilities and promoting sports and games. Apparatus for children and youth, grounds for tennis, basketball, baseball, field sports and athletic games—these are lacking.

El Paso is fortunate in having the canal and the river to provide cheap water for swimming pools. There is no reason why we should not have enough pools to meet the universal need. It is really more a matter of taking thought and planning intelligently, than of money.

And every live community, however small, can have a pool if it will. It will be well to begin with outdoor pools for summer, and then the winter pools will come with the demand.

America does not take pains enough to detect genius and does not encourage it enough when found unless it is of a kind that can be converted into quick money.

The course of married life is often determined by the first meal together.

Where do they get bones to feed all El Paso's dogs?

The southwest needs a great national playground.

Little Interviews.

Tick Eradication Does Wonders For Austin County Cattle

"Meanest Man" Is He Who Advertises In Patriotic Parade

"CATTLE from the 'tick zone' that have been properly dipped and thus freed of ticks bring at least a head more than tick infested animals," said L. A. Macomber, cattle raiser at Del Rio, Texas. "I have seen a head of cattle that has been dipped and sold for \$100, while a head of tick infested cattle would bring only \$50. The difference is in the fact that the tick infested cattle is a liability, while the dipped cattle is an asset."

"I was recently in a Missouri city where during the summer months a head of cattle was sold for \$100, while a head of tick infested cattle would bring only \$50. The difference is in the fact that the tick infested cattle is a liability, while the dipped cattle is an asset."

"The former end of this country has had in former years considerable loss during the summer months. This has been entirely eliminated now, in my opinion, by the systematic tick eradication and the cooperation of the cattle interests in this work for the coming season. The result is assured and will not doubt have splendid results."

"I think the practice of driving laundry wagons, delivery trucks and other vehicles in a patriotic parade, when the cars are old, decrepit and when it is merely a case of some one trying to get a little free advertising, is despicable," said L. T. Anderson, of San Antonio. "I have seen a head of cattle that has been dipped and sold for \$100, while a head of tick infested cattle would bring only \$50. The difference is in the fact that the tick infested cattle is a liability, while the dipped cattle is an asset."

Britain Cries For Hoover.

BRITISH editorial comment on the nomination of senator John Edwards, considered in England anti-British because of his attitude toward the league of nations, and disappointment due to the failure of the convention to nominate Herbert Hoover.

That the British would like to see Hoover president is indicated by the expressions of the London Times and the Daily News, which now advise the Democrats to name the former food administrator. Hoover lived so long in England that the English have begun to regard him as their own.

And Hoover's war work commands him to Great Britain. He would undoubtedly be the Democratic nominee. He is of the dictator type that the Democrats like, and he is the logical successor of Wilson as leader of the internationalists in the United States. No one could more fittingly represent Wilsonian ideals in foreign relations and autocratic rule.

There is a situation on the farm of the country, and particularly of the southwest where men are farther from centers of recreation, that is giving increasing worry to farmers and to thoughtful business men everywhere. The farms must have efficient workers if they are to continue producing food on a large scale. Though our food sources are menaced, there are in the cities many idlers. Some of them have done farm work and could soon acquire the knack again.

No man has a right to shirk work when work is needed to bridge a nation over a crisis such as a food shortage. The loafer should have his choice of essential jobs, but between working and loafing he should have no choice.

California boasts that she will have \$250,000,000 invested in hydro-electric development within the next ten years. It is her announced plan to electrify all railroad systems within her borders within this same time. This is a big dream, but California will probably realize it, because she has taken stock of her latent resources and developed them. That part of the southwest lying around El Paso could benefit itself mightily by developing the power resources at Elephant Butte dam.

Collective bargaining is a widely recognized principle, but it must be bargaining and not dictation and despotism that ties up transportation and shackles industry.

Why not let everybody give all he has to the government and let the government take care of all of us and be done with it?

It is a fine thing for the Gideons to put a Bible in each hotel room, but they ought to give some of them to the landlords too.

If all shoes were made of leather it might make them higher, but it would certainly help the paper shortage.

Maybe the men who planted the \$10,000 worth of whisky east of Ft. Bliss thought it would grow.

The trouble is you always have to be breaking somebody up.

Better trust all, and be deceived.

And keep that trust that deceiving.

Then doubt one heart that, if believed,

Had blessed one's life with true believing.

—FREDERICK ANNA KEMBLE.

move than to establish a clinic for the training of mothers. I understand such work is being done on a small scale already, but it should have a wider scope.

"Unless a big new Mexican oil field is discovered, the price of oil will go down and will not be borne out," said Anthony McCaskey, who has been in the oil business for a long time. "I think such a clinic would be a good thing for El Paso. During the summer months the mothers of the city have a hard time caring for their children and many babies suffer from the ignorance of their parents."

"The clinic of which I speak is one where competent trained nurses, under supervision of the mother, in cases of illness they treat and care for the children."

"It is not only poor mothers who do not know how to care for their children. Often parents who are well to do have children who are ill because of improper dieting and care would make a better."

"El Paso could make as better convention history; and in both instances, convention 'trails' are involved.

A majority suffices to nominate Republican candidates; but ever since 1912, when Andrew Jackson established the "two-thirds rule" to aid him in forcing Van Buren's nomination for vice president, a two-thirds majority has always been necessary to nominate Democratic candidates. Frequent efforts have been made to change this rule, but it still stands and has never been suspended.

Its companion, the "unit rule," under which a majority of a state's delegation can elect one of its members, also differs from standard Republican practice. It, too, was sacred for three-and-a-half decades until amended at last, in 1916, consistent with the need to recognize the integrity of instructions from presidential primaries.

The "two-thirds rule" has sometimes prevented majority nominees from reaching the final goal—like James E. Cox in 1920, who had a majority of 24 but lost to the Democratic two-thirds; and like Clark in 1912, who had a presidential majority on the tenth roll call but failed of the ultimate two-thirds.

Naturally this rule has prolonged Democratic conventions beyond the Republican average. Since 1924 the average number of Republican roll calls to nominate a president has been between four and five; the average number of Democratic roll calls has been between nine and ten. The hardest fights were in 1920 when 59 roll calls were necessary to elect Cox; in 1912 when 46 roll calls were necessary to name Wilson; and in 1888 when 23 roll calls were necessary to name Seymour. Meanwhile, Democratic conventions, like Republican

conventions, have made little contact with the people. When these presidential nominees have been named on one ballot.

Of the 11 nominations which this "two-thirds" rule will now proceed to record, five have won the elections at the succeeding November polls.—Copyright, 1920, by the McClure Newspaper Syndicate.

To be continued tomorrow with the story of the 1920 convention.

GEN. ESCOBAR CELEBRATES ANNIVERSARY OF BATTLE

The anniversary of the battle of Juarez was celebrated by Gen. J. Gonzalez Escobar with an informal dinner given to a few of his intimate friends in the restaurant of the Central cafe at Juarez.

Just a year ago Villa attacked Juarez and was repulsed by a charge led by Gen. Escobar, then a colonel of the Juarez garrison. Escobar was wounded, his gallantry won for him promotion to general.

Among Gen. Escobar's guests were Gen. Carlos Felix Diaz, collector of customs, and Luis Montes de Oca, consul for the de facto government. Gen. Escobar is here to buy horses for use in the campaign against Villa.

TWO NEW PLAGUE CASES ARE REPORTED IN TAMICO

Mexico City, Mex., June 15.—Two cases of bubonic plague have been reported at Tamico, according to the Excelsior's correspondent in that city.

PLAG DAY CELEBRATED AT MEXICAN EMBELEY Y. M. C. A.

Plag day was celebrated at the Mexican EMBELEY Y. M. C. A. About 100 men and boys assembled to hear an explanation of the meaning of this commemorative day. They were told of the advantages and freedom enjoyed under the Stars and Stripes. After the assembly had marched past and saluted the flag, 100 small flags were distributed among those present.

ARIZONA "GOOD ROADS DAY"

Phoenix, Ariz., June 14.—Members of the Maricopa county committee of the "Good Roads Day" met here yesterday to arrange for a state "good roads day" in this and other counties of Arizona next Friday. The purpose was to arrange to exert every effort on that day to secure signers of the initiative petition for state highway commission legislation.

SCHOOL DAYS

HOROSCOPE

MARS and Venus rule strongly for good today, according to astrology. Neptune and Jupiter are midday adverse.

It is a way especially fortunate for women and all their ambitions and aspirations. Reforms that benefit them are foreshadowed.

Those who have at heart the best interests of the world should find this planetary government especially favorable. Philanthropic and altruistic movements should prosper.

Engineers and all who are concerned in building or machinery have the best possible forecast. There will be great construction in the next few months, and reforms that benefit them are foreshadowed.

Questions and Answers.

Q. IS there a difference in the color of the paper on which honorable discharges from the army are written? L. O.

A. The war department states that an honorable discharge is written on white paper, a discharge without honor on blue paper, and a dishonorable discharge on yellow paper.

Q. When was the white house first occupied and how much land is included in its yard? V. I. M.

A. John Adams was the first president to occupy the white house in 1800. In those days it was a private residence of a Virginia freemason. After the British burned it in 1814, white paint was used to cover the marks of the fire, and since that time this paint has been renewed regularly. The white house grounds within the iron fence contain 16 acres while the adjoining white lot has 79 acres.

Q. Is the baseball in use this year any different from last season's? H. A.

A. The increase in base hits and home runs this season has led to a rumor that the ball being used is heavier than the one used last year. This rumor is unfounded. The baseball is the same as last year's, but the players are using it more heavily.

Q. What are the names for male and female animals? E. F. K.

A. In America we refer to both males and females as "cows," but in England the male is sometimes called a "cob" and the female a "heifer."

Q. How can stains made by floor oil be removed from white canvas shoes? C. D.

A. First, clean the shoes with soap and water. Then, rub the shoes with a piece of fine sandpaper. This will remove the oil and make the shoes look like new.

Q. What is the reason why your hair is not glossy after being washed, and why it does not curl, is that you do not rinse out all the soap? People do. In shampooing the hair, go over it twice with soap and rinse four times with water. Once in a while, naturally curly hair frequently loses its wave when it contains a lot of soap.

Q. What is the reason why your hair is not glossy after being washed, and why it does not curl, is that you do not rinse out all the soap? People do. In shampooing the hair, go over it twice with soap and rinse four times with water. Once in a while, naturally curly hair frequently loses its wave when it contains a lot of soap.
